| 1:15 PM—2:00 PM | Closing Session <i>Patient Panel</i> <i>Thank You Ceremony for Clinical Research Volunteers</i> |

BEFORE PARTICIPATING IN A CLINICAL TRIAL:

What You Need to Know:

Before volunteering for a clinical trial, it is important to learn as much as possible about the trial and the care you can expect to receive while you are in it. You may wish to ask the questions below before making a decision about whether to enroll in a clinical trial.

- What is the purpose of the study?
- Who is going to be in the study?
- Why do researchers believe the experimental treatments being tested may be effective?
- Has it been tested before?
- What kinds of tests and experimental treatments are involved?
- How do the possible risks, side effects, and benefits in the study compare with my current treatment?
- How might this trial affect my daily life?
- How long will the trial last?
- Will hospitalization be required?
- Who will pay for the experimental treatment?
- Will I be reimbursed for other expenses?
- What type of long-term follow up care is part of this study?
- How will I know that the experimental treatment is working?
- Will results of the trial be provided to me?
- Who will be in charge of my daily care?

What is Informed Consent?

Informed consent is the process of learning key facts about a clinical trial before deciding whether or not to participate in it. When an individual enrolls in a clinical trial, the research team will provide them with an informed consent document that includes details about the study including its purpose, duration, required procedures, and key contacts. Risks and potential benefits of the clinical trial also are explained in the informed consent document.

CISCRP is an independent nonprofit organization dedicated to educating and empowering people to make informed decisions regarding participation in clinical research. CISCRP does not recruit patients for clinical trials and does not conduct clinical trials.

AGENDA: Saturday, February 20, 2010

10:00 AM—2:00 PM
